Mediatrix 4102S and C7 series certified with OmniPCX Enterprise™ and OXO Connect™

Mediatrix access gateways and analog VoIP adapters (Mediatrix 4102S and C7 Series) are now officially compliant with Alcatel-Lucent Enterprise OXE/OXO. ALE tested and validated both families of media analog gateways and certified them as complementary to their solution portfolio.

The completion of the interworking certification vouches for the Mediatrix VoIP adapters' full interoperability with ALE OmniPCX™ Enterprise (OXE) and OXO Connect Evolution platforms. This allows enterprises of all sizes to benefit from superior business communications with advanced collaboration tools and outstanding end-user experience.

Integration Overview:

The Mediatrix C7 Series and 4102S link any analog connection to an IP network and delivers a rich feature set for a comprehensive VoIP solution. With FXS/FXO ports, local call switching and user-defined call properties (including caller/calling ID), Mediatrix 4102S and the Mediatrix C7 Series of analog gateways smoothly integrate into legacy PBXs and incumbent PSTN networks.

Integration Details:

The Mediatrix analog gateways (C7 Series, S7 Series, and 4102S) connect to the OXE/OXO systems through an IP network (LAN/WAN). Analog phones connected to its FXS ports can be used as SIP extensions on OXE/OXO. Even after loss of network connectivity, it provides local survivability to phones; they will continue to be able to call each other.

Not only basic calls are supported. Furthermore, other features such as hold, transfer, conference, etc. can be used with the analog phones.
